Curriculum Development Opportunity

Equine Guelph and Open Learning and Educational Support (OpenEd) are recruiting for a course developer who has the academic knowledge and experience to revise the curriculum of the Management of the Broodmare, Stallion and Foal online course. This course is part of the Equine Studies program and focuses on equine reproduction and effective management practices of broodmares, stallions and foals through the breeding to birth cycle.

The Equine Studies certificate and diploma programs offer 20 online science and business courses for the horse owner. Based on research and evidence-based practice the course content draws on the expertise of Equine Guelph, Ontario Veterinary College, and our equine industry partners.

Position Description

We are looking for a course developer who is available to work with the OpenEd team as a subject matter expert (SME) to design and write course content beginning January 13, 2020, and concluding August 31, 2020.

Course developers at the University of Guelph work in a team environment with an instructional designer, program developer and media specialist to develop curriculum, write content and create multimedia. As a course developer, you will be expected to participate in curriculum planning meetings, review learning outcomes, develop an assessment strategy, select readings and resources, create unit content and multimedia assets, select activities, and conduct a review of the final course in the course learning management system.

Course Format

We provide our students with an engaging, relevant learning experience where they can immediately apply the concepts learned in the course to improve the health and welfare of horses.

The equine study courses are non-degree credit courses. All courses are 12 weeks in length, delivered entirely online through the University of Guelph’s online learning management system (Brightspace by D2L), and follow the semester system with courses beginning in September, January, and May. The courses are fully facilitated by an instructor, and all students begin and end the course together.

Course Description

The future career of a horse depends on the development of a solid foundation, even before conception! This course will introduce you to equine reproduction and effective management practices of broodmares, stallions and foals through the breeding to birth cycle. You will gain practical knowledge on a broad range of topics relevant to horse owners considering breeding.
The course content, activities, discussions, and video demonstrations will cover such topics as anatomy and function of the reproduction system, nutrition and feeding considerations, behaviour, natural and artificial breeding options, the birthing cycle and the growth and development of the foal in the first months of life. The emphasis is on supporting the welfare of the horse, applying standards of care, and the prevention of problems.

This course will not make you an expert in the breeding shed or foaling barn, but you will be more prepared and confident, in partnership with your vet, to move into the fascinating area of equine reproduction.

Qualifications

- A university degree (DVM, PhD) from an accredited institution with expertise in equine reproduction.
- At least three years’ experience in the field. You are knowledgeable of current resources and research in the equine reproduction field.
- Exceptional written communication skills. You can communicate effectively with students using tools such as email, Skype, and web-conferencing.
- Teaching experience in an online environment. You show a dedication to teaching and learning, and you are committed to creating quality courses for continuing education students.
- Previous participation in an online course as a student. You have first-hand experience as a student in an online class.
- A commitment to meeting timelines. You can balance the competing priorities for your time and ensure they do not interfere with developing the course.
- A level of confidence with computer technology, and the ability to master a learning management system. You have the ability and desire to learn the software required to successfully develop an online course.
- Access to the internet and computer technology required to participate in and complete the work required to develop an online course, including access to audio and video equipment and software.

To Apply

If you are interested in this position, please respond by sending a resume/CV with a cover letter outlining your education and experience, how you meet the stated qualifications, and why you want to be part of this continuing education online program.

Resumes must be submitted by December 30, 2019 to:

Marjory Gaouette
Open Learning and Educational Support
University of Guelph

Email Marjory Gaouette (m.gaouette@uoguelph.ca)

Please note this position will remain posted until it is filled.
